### Data I/O steps up device support

As part of a new initiative to increase the pace of new device support, Data I/O is stepping up the number of extra devices added at each revision.

The recently release 6.2 software for 2900, 3980, Unisite, Labsite, Chiplab and 2700 programmer families has added support for over 270 devices.

Highlights from the new release include new Altera parts including EPC2, new low-voltage parts from AMD, Fujitsu and others, many brand new Flash devices up to 32 Mbit, several Microchip PIC devices in the 12C and 16C ranges, and a number of new Xilinx XC95xxx parts.
